JMW Thermofluid has a built in transformer to provide isolated low voltage heating, with two independent circuits, one to control the plate temperature and a second to ensure they do not overheat. Audible and visual alarms are provided in addition to the internal self diagnostic fault indicators. A green LED indicates the unit is on. A flashing amber LED indicates the unit has reached the required temperature and the display will show the temperature reached. A red LED and an audible alarm indicate a fault.

Dry warmer this eliminates the risk of spillage during emergencies.

Quickly reaches temperature in approximately two minutes.

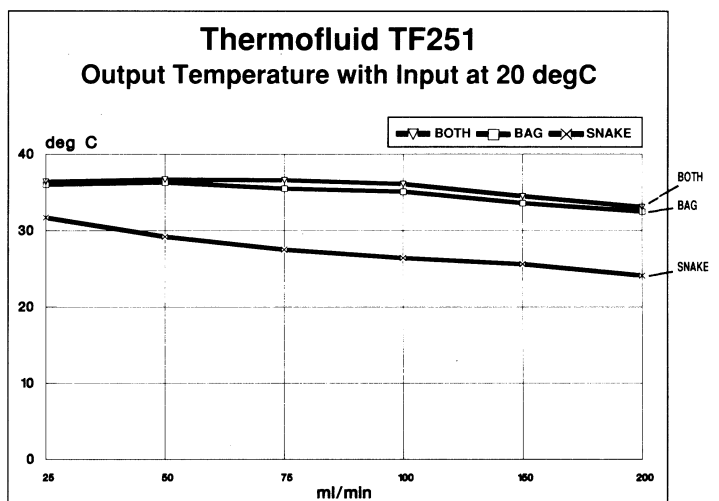

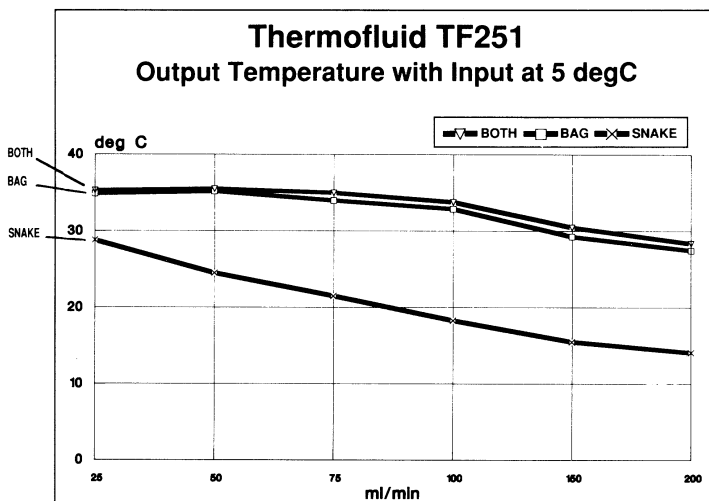

Easy to operate with only one switch and one test button. The surfaces are easy to clean.

Can be opened and closed during operation.

The TF251 offers two systems for the price of one. The first plate takes 4mm extension tubing whilst the other uses the popular disposable insert which is available from JMW Medical as a TFinert. The two plates can again be used separately or simultaneously for different fluids.

EXCELLENT AFTER SALES SUPPORT

A full service manual backed up by JMW Medical's Technical Department is supplied, or an extended warranty can be arranged.
